About Us

Sustainable Timber Tasmania manages Tasmania's public production forest for a vast array of environmental, social and economic values. Managing these forest values respectfully, innovatively and sustainably is at the heart of everything we do. As a Government Business Enterprise, we are committed to sustainably managing the forest estate, sustainably supplying timber and sustainably growing our business. Sustainable Timber Tasmania is proud to be a recognised as a Tasmanian Employer of Choice. Our people are key to the success of the business and we invest in the development of a flexible, diverse, supportive and inspiring workplace.

Our Values

Respect	<i>we create safe places</i>
Responsibility	<i>we take ownership</i>
Growth	<i>we create sustainable value</i>
Excellence	<i>we make it happen</i>

Application Developer

The primary role of the position is to implement business systems by analysing, designing, developing, testing and installing software solutions. Works within the Business Systems team to ensure STT's business systems remain efficient and compliant throughout the application development life cycle.

Position Accountabilities and Selection Criteria

- Work with staff and peers to design and implement business systems which support business objectives and processes
- Provide practical and cost-effective business system solutions to support business improvement
- Utilise project management skills to ensure business systems are delivered on time and within budget
- Effectively determine system requirements by observing and analysing business processes targeted for improvement
- Identify, evaluate and develop systems and procedures to support approved recommendations
- Design software solutions in accordance with agreed corporate standards

Application Developer

- Ensure delivered software applications meet business and technical requirements as detailed in the system design documents
- Maintain and develop new functionality and enhancements for legacy software applications
- Provide user and technical documentation and end user training which ensures delivered applications are used effectively
- Work effectively with external stakeholders to achieve desired outcomes relating to approved projects

Skills, Experience & Qualifications

- Tertiary education in computer sciences or similar
- Proven experience in software development
- Knowledge in a range of contemporary computer languages, data structure and integrity, computer logic, flow-charting, computer program design methods and techniques and workflows
- Strong understanding of object-orientated programming
- Proficient in SQL
- Ability to design and document process models
- Capable of writing use cases and software specification documents
- Communication skills to effectively liaise with internal and external stakeholders
- Thorough application testing and troubleshooting skills
- Data modelling, database and data warehouse design skills including experience with various contemporary reporting tools

Contact
